

Custom Manufactured Swivelpole™ Assemblies

Flux Connectivity is a value-add manufacturing solutions provider for Swivelpole™ products for Canada and the U.S.

Flux Connectivity builds custom lowering pole configurations with the Swivelpole™ joint based on your requirements.

All poles, with or without devices, are wired and ready for installation on site. Flux will provide any specific sizes and specific devices required on the pole prefabricated, including;

Lighting

Solar Panels

CCTV and Surveillance

Sirens and Alarms

Networking

Instruments

Flux allows you to purchase your assemblies through either your preferred distribution channel or direct, depending on your individual project requirements.

WHY OFF-SITE MANUFACTURING?

REDUCE LABOR REQUIREMENTS: Flux manufactures the pole to your specifications to help reduce your on-site labor requirements and costs.

CONSOLIDATE VENDORS: Flux procures the individual parts for you as part of the manufacturing process, thereby reducing the number of BOM components you would otherwise have to purchase and track through multiple vendors.

INCREASE SAFETY: Flux manufacturing reduces the skilled labor requirements onsite and reduces the risk of safety incidents.

IMPROVE LOGISTICS: Flux can ship various configurations to specific sites around Canada and the U.S. to help simplify management on large projects.

Swivelpole™ installations ensure maximum up-time, improved safety and reduced operating costs.
